

Anti-GluN2A(GluRε1, NR2A)*(NMDA-type glutamate receptor subunit 2A)***Code Number** : GluRε1C-Rb-Af542 (rabbit, RRID : AB_2571605)**Size** : 20 µg and 50 µg / See label on vial
(affinity-purified with antigen polypeptide)**Formulation** : Liquid ; 200 µg/ml in PBS with 0.05% NaN₃.**Storage** : Store at 4 °C. The antibody can be stored at 4 °C. The antibody can be also aliquotted and stored at -80 °C for long-term storage. Avoid repeated freeze-thawing. Non-hazardrous. No MSDS required.**Species** : rabbit, polyclonal**Antigen** : mouse GluRε1 (NR2A),
C-terminal 1126-1408 aa by Meguro et al., 1992 (1148-1430aa in D10217)**Specificity** : mouse (others not tested)

Immunoblot detects a single protein band at 175kDa, with no cross reactivity to other iGluR subunits, including GluRε2 (NR2B).

See the reference 1 for immunoblot and immunohistochemistry.

**Applications** : In general, affinity-purified antibody is used at around 1 microgram/ml for immunoblot and immunohistochemistry. The most appropriate concentration should be determined by users, because it depends on contents in given cells, tissues and organs.**Research Use** : For research use only, not for use in diagnostic procedures.

Remarks : For immunohistochemistry for neuronal iGluRs, users should adopt postembedding immunogold for electron microscopic detection and protease predigestion for light microscopic detection (see the below reference). For glial GluR, these antigen-exposing methods are not necessary (unpublished information).
